

schülke introduces euxyl® K 940

schülke introduces the latest in its line of enhanced preservative systems, **euxyl® K 940**. **euxyl® K 940** contains an intelligent combination of preservative actives with the emollient and booster, ethylhexylglycerin, to deliver a product of superior performance for a wide range of product types. It can be used at low levels when formulating products for sensitive skin. Hard-to-preserve systems can be formulated using higher levels without the danger of exceeding regulatory limits.

euxyl® K 940 is globally approved, virtually colorless, with a very low odor. It is stable to hydrolysis and pH and can be used in most formulation types.

connected – by design

euxyl® K 940 bridges the gap between science and nature to be the perfect protection for formulations. Consumers want products that are effective, but are also safe and sustainable. To give them the best of both worlds, **euxyl® K 940** from schülke contains a sophisticated, balanced spectrum of mild actives, which offer peerless protection.
